

## RALPH L. WADSWORTH CONSTRUCTION SAVES 20+ HOURS PER WEEK WITH BUILD2WIN FIELD TRACKING

Founded in 1975 and recently acquired by Texas Sterling Construction, Ralph L. Wadsworth Construction constructs multi-million dollar bridge and highway projects throughout the Intermountain West.

Prior to 2009, the Utah-based company was managing their field data with excel spreadsheets, faxed and e-mailed in weekly. But as the company continued to grow, this method became increasingly inefficient. To save time and money, Wadsworth purchased BUILD2WIN Field Tracking—a product they were confident would be as beneficial in the field as it's sister product, BID2WIN Estimating & Bidding, had been to their estimating department for the past five years.

“BID2WIN Software’s construction management suite has allowed us to streamline the use of our estimating and bidding software, field data collection and accounting software,” explains Doug Clements, Special Initiatives at Wadsworth.

The return that the company has seen on their investment in BUILD2WIN is significant, says Clements, explaining that they have saved one clerical position and then some. “Between labor and equipment, BUILD2WIN saves us 20+ hours per week.”

BUILD2WIN’s reporting capabilities have also proven to be especially beneficial for Wadsworth, he explains.

**“WE USE THE LABOR AND EQUIPMENT REPORTS RELIGIOUSLY AND OUR SUPERINTENDENTS IN THE FIELD CAN COMPARE THE ACTUAL TO BUDGETED COST, WHICH HELPS THEM MAKE BETTER DECISIONS AND STAY ON TRACK.”**
